European Technical Assessment Body for construction products

European Technical Assessment

ETA-24/0286 of 12 June 2024

of 12 June 2024

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the Deutsches Institut für Bautechnik **European Technical Assessment:** Trade name of the construction product Sympafix construction plug CP-PLUS Product family Plastic anchors for redundant non-structural systems n to which the construction product belongs concrete and masonry Manufacturer Sympafix B.V. Fluorietweg 25E 1812RR ALKMAAR NIEDERLANDE Manufacturing plant Factory RC This European Technical Assessment 26 pages including 3 annexes which form an integral part contains of this assessment This European Technical Assessment is EAD 330284-00-0604, edition 12/2020 issued in accordance with Regulation (EU) No 305/2011, on the basis of

Page 2 of 26 | 12 June 2024

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Page 3 of 26 | 12 June 2024

Specific part

1 Technical description of the product

The Sympafix construction plug CP-PLUS is a plastic anchor consisting of a plastic sleeve made of polyamide and an accompanying specific screw of galvanised steel or of stainless steel.

The plastic sleeve is expanded by screwing in the specific screw which presses the sleeve against the wall of the drilled hole.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchors of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Safety in case of fire (BWR 2)

Essential characteristic	Performance		
Reaction to fire	Class A1		
Resistance to fire	See Annex C3		

3.2 Mechanical resistance and stability (BWR 4)

Essential characteristic	Performance
Resistance to steel failure under tension loading	See Annex C1
Resistance to steel failure under shear loading	See Annex C1
Resistance to pull-out or concrete failure under tension loading (base material group a)	See Annex C2
Resistance in any load direction without lever arm (base material group b, c, d)	See Annexes C4 – C6 and C8
Edge distance and spacing (base material group a)	See Annex B3
Edge distance and spacing (base material group b, c, d)	See Annex B4 and B5
Displacements under short-term and long-term loading	See Annex C3, C7, C9
Durability	See Annex B1

Page 4 of 26 | 12 June 2024

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with European Assessment Document EAD 330284-00-0604 the applicable European legal act is: 97/463/EC. The system to be applied is: 2+

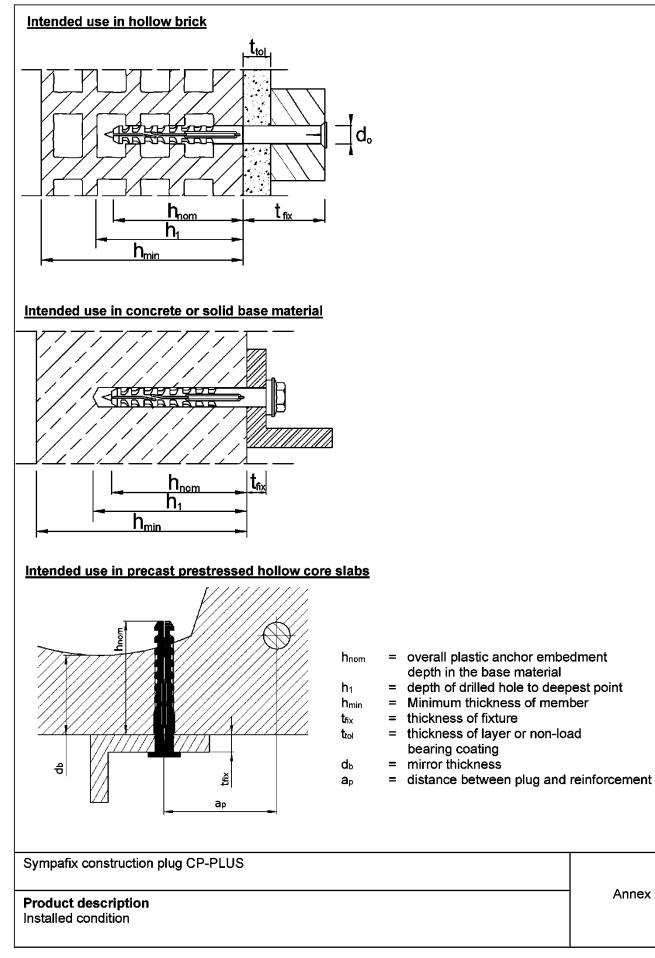

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 12 June 2024 by Deutsches Institut für Bautechnik

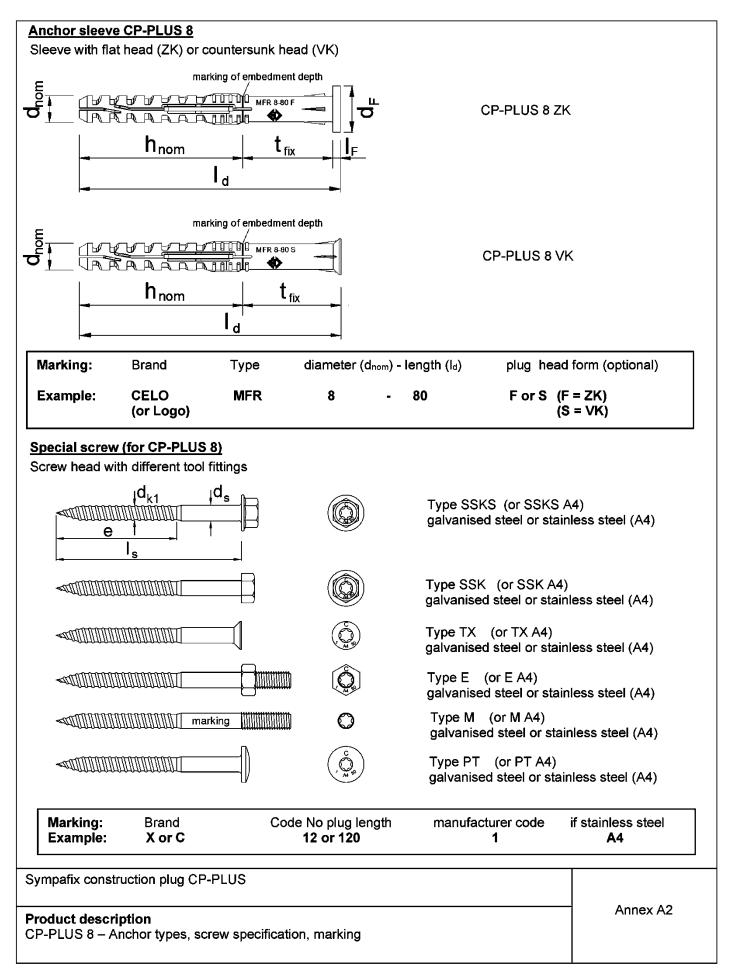

Dipl.-Ing. Beatrix Wittstock Head of Section *beglaubigt:* Ziegler

Sympafix construction plug CP-PLUS

Product description Dimensions and materials

Annex A6

Specifications of intended use

Anchorages subject to:

- Static and quasi-static loads.
 - Redundant non-structural systems.

Base materials:

- Reinforced or unreinforced normal weight concrete without fibres with strength classes ≥ C12/15 (base material group a) according to EN 206:2013+A1:2016, Annex C2 and Annex C3.
- Precast prestressed hollow core slabs with strength classes ≥ C20/25 (base material group a) according to EN 206:2013+A1:2016, see Annex C2
- Solid brick masonry (base material group b) according to EN 771-1/-2/-3:2011+A1:2015, see Annex C4-C6 Note: The characteristic resistance is also valid for larger brick sizes and higher compressive strength of the masonry unit.
- Hollow brick masonry (base material group c) according to EN 771-1/-2/-3:2011+A1:2015, see Annex C4-C6
- Autoclaved aerated concrete (base material group d) according to EN 771-4:2011+A1:2015, see Annex C8
- Mortar strength class of the masonry ≥ M2,5 according to EN 998-2:2010.
- For other base materials of the base material groups a, b, c or d the characteristic resistance of the anchor may be determined by job site tests according to EOTA TR 051:2018-04.

Temperature Range for use:

- a: 40° C to + 40° C (max. short term temperature + 40° C and max long term temperature + 24° C)
- b: 40° C to + 80° C (max. short term temperature + 80° C and max long term temperature + 50° C)

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (screw made of zinc coated steel, stainless steel)
- The specific screw made of galvanised steel may also be used in structures to external atmospheric exposure, if the area of the head of the screw is protected against moisture and driving rain after mounting of the fixing unit in this way, that intrusion of moisture into the anchor shaft is prevented. Therefore there shall be an external cladding or a ventilated rainscreen mounted in front of the head of the screw and the head of the screw itself shall be coated with a soft plastic, permanently elastic bitumen-oil-combination coating (e. g. undercoating or body cavity protection for cars)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist (screw made of stainless steel).

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

Design:

- The anchorages are to be designed in accordance with EOTA TR 064:2018-05 under the responsibility of an engineer experienced in anchorages and masonry work.
- Verifiable calculation notes and drawings shall be prepared taking account of the loads to be anchored, the nature and strength of the base materials and the dimensions of the anchorage members as well as of the relevant tolerances. The position of the anchor is indicated on the design drawings.

Installation:

- Hole drilling by the drill methods according to Annex C4, C5 or C6 for base material group b and c and according to Annex C8 for base material group d, hammer drilling is to be used for base material group a.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Temperature of the plug at installation from 0°C to + 50°C.
- Exposure to UV due to solar radiation of the anchor not protected \leq 6 weeks.
- No ingress of water in the borehole at temperatures < 0°C

Installation instruction CP-PLUS in concrete or in hollow core slabs in masonry 1. Drill the borehole and clean the hole. Drilling method: Concrete: hammer drill Masonry: According Table C4, C5, C6 2. Hammer in the plug slightly through the fixture part till the plug is flush to this. Minimum setting depth (50 mm or 70 mm) must be observed. 3. Tighten the screw with screw driver till the screw touches the collar of the sleeve. The screw must fit tight on the surface of the fixture part. 4. Correctly installed plug with screw in concrete or in masonry. 4. Correctly installed plug with screw in hollow concrete core slab. Sympafix construction plug CP-PLUS Annex B7 Intended use Installation instruction
