The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Page 3 of 24 | 18 October 2024

Specific Part

1 Technical description of the product

The Wedge anchor Chemofast BA3 / BA3 A4 / BA3 HCR is a fastener made of zinc plated steel, stainless steel or high corrosion resistant steel which is placed into a drilled hole and anchored by torque-controlled expansion.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the fastener is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the fastener of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	see Annex B3, C1, C2
Characteristic resistance to shear load (static and quasi-static loading)	see Annex C3
Characteristic resistance for seismic performance categories C1 and C2	see Annex C4, C5
Displacements	see Annex C8, C9, C10

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance		
Reaction to fire	Class A1		
Resistance to fire	see Annex C6, C7		

3.3 Aspects of durability

Essential characteristic	Performance
Durability	See Annex B1

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330232-01-0601-v05 the applicable European legal act is: 1996/582/EC.

The system to be applied is: 1

European Technical Assessment ETA-24/0686

English translation prepared by DIBt

Page 4 of 24 | 18 October 2024

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

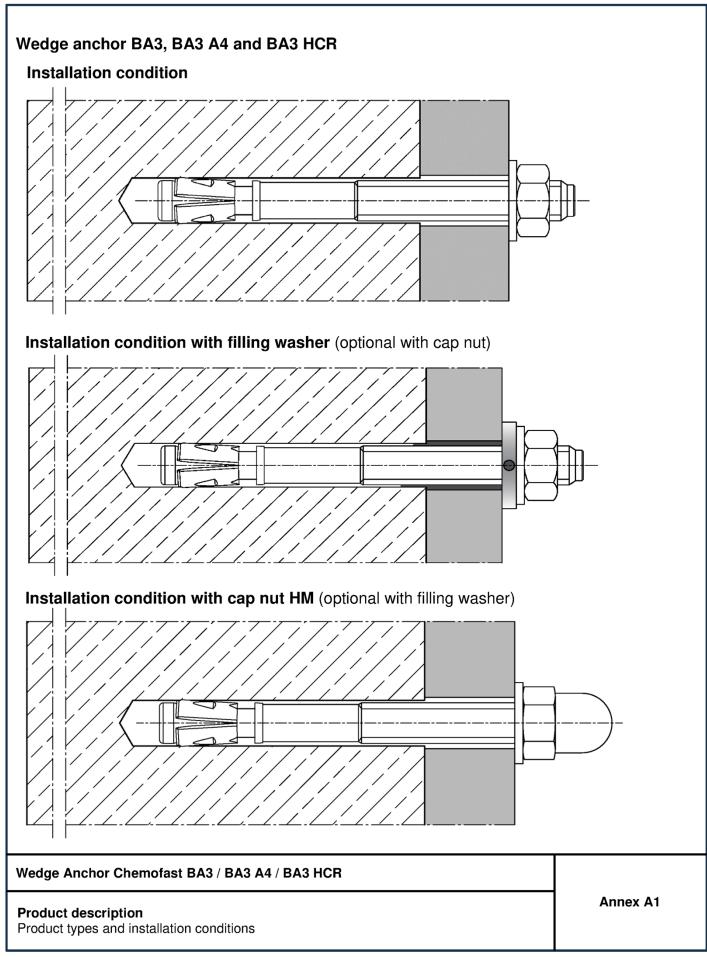

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 18 October 2024 by Deutsches Institut für Bautechnik

Wedge Anchor Chemofast BA3 / BA3 A4 / BA3 HCR

Product description
Material and dimensions

Annex A3

Specifications of intended use									
Wedge Angles	BA3 / BA3 A4 / BA3 HCR								
Wedge Anchor	M8	M10	M12	M16	M20				
Static or quasi-static action			✓						
Seismic performance categories C1 and C2	✓								
Fire exposure	R30 / R60 / R90 / R120								
Variable, effective anchorage depth	35 mm to 90 mm	40 mm to 100 mm	50 mm to 125 mm	65 mm to 160 mm	90 mm to 140 mm				

Base materials:

- For all anchor sizes: compacted reinforced or unreinforced normal weight concrete according to EN 206:2013+A2:2021
- For anchor sizes M8 to M10: steel fibre reinforced concrete (SFRC) according to EN 206:2013+A2:2021 including steel fibres according to EN 14889-1:2006, clause 5, group I. The maximum content of steel fibres is 80 kg/m³.
- Cracked or uncracked concrete
- Strength classes C20/25 to C50/60 according to EN 206:2013+A2:2021

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions: all materials
- For all other conditions corresponding to corrosion resistance classes CRC according to EN 1993-1-4:2006 + A1:2015: stainless steel according to Annex A3, Table A2 of this ETA

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored.
 The position of the fastener is indicated on the design drawings (e.g. position of the fastener relative to reinforcement or to supports, etc.).
- Design method EN 1992-4:2018 and Technical Report TR 055:2018

Installation:

- · Hole drilling by hammer drill bit or vacuum drill bit
- Use of the fastener only as supplied by the manufacturer without exchanging the components of the fastener (exception: when using the cap nut HM)
- The anchor can be set in pre- or through-setting installation.
- Optionally, the annular gap between fixture and stud of BZ3 can be filled to reduce the hole clearance. For this purpose, the filling washer (Annex A3) must be used in addition to the supplied washer. For filling use Chemofast Injection Adhesive (e.g. UM-H, VK, EP 1000) or other high-strength injection mortar with compressive strength ≥ 40N/mm².

Installation instructions

Hole drilling with cleaning

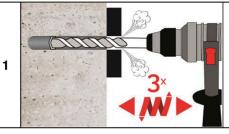

Hammer drilling or vacuum drilling:

Drill hole perpendicular to concrete surface. If using a vacuum drill bit, proceed with step 3.

Blow out dust. Alternatively vacuum clean down to the bottom of the hole.

Hammer drilling without cleaning (M20)

When the drill hole depth ($h_1 = h_{ef} + 31 \, \text{mm}$) is reached, move the drill back and forth at least three times with the machine switched on to remove the dust in the drill hole (venting the drill hole). Continue with step 3.

Wedge Anchor Chemofast BA3 / BA3 A4 / BA3 HCR

Intended use

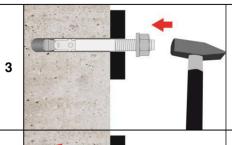

Installation instructions - hole drilling and cleaning

Annex B5

Installation instructions - continuation

Insert fastener

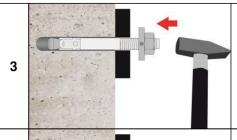

Drive in fastener.

Apply installation torque Tinst.

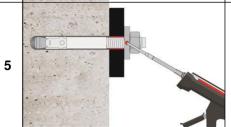

Insert fastener with filling of annular gap

Drive in fastener with additionally mounted filling washer.

Apply installation torque Tinst.

Fill the annular gap between anchor and fixture with injection adhesive (see Annex B1).

Use enclosed reducing adapter.

The annular gap is completely filled, when excess mortar seeps out.
